DAVID UWAGBALE

Full-stack Software Engineer
Email: duwagbale07@gmail.com | GitHub: davidtimi1 | Website: davidtimi.vercel.tech | LinkedIn: David Uwagbale | Phone: +234 902 230 1155

EDUCATION

FEDERAL UNIVERSITY OF TECHNOLOGY AKURE — Ondo, Nigeria
B.Tech Computer Science (**CGPA: 4.85 / 5.0**) — Expected Graduation: 2028

TECHNICAL SKILLS

- Languages: Typescript, Javascript, Python, C, SQL.
- Frameworks: Nextjs, React, Django, Flask, Express.
- Tools & Infrastructure: Git, Github, Docker, Websockets (Socket.io), Figma, MySQL, SQLite, Clickup, Slack, Convex.
- Databases & State: Neo4j, Redis, MySQL, SQLite, BullMQ, Zustand, TanStack Query

PROFESSIONAL EXPERIENCE

FRONTEND ENGINEER | Dlab Technologies — 06/2025 – Present
- High-Performance Web3 Architecture: Engineered responsive interfaces for Liquidramp and Dexfiat, integrating UIs with high-throughput P2P fiat-crypto ramps and liquidity pools.
- State Sync: Designed a modular data layer via TanStack Query and Zustand to synchronize clients with volatile, real-time backends.
- Diagnostics: Integrated Sentry and Mixpanel telemetry, reducing production exceptions by 30%.

FULLSTACK ENGINEER | Deep Funding (Deep Labs) — 09/2025 – 04/2026
- Asynchronous Architectures: Scaled decentralized AI model integration by building 2 production MVPs, optimizing API layers to handle high-concurrency requests for Next.js applications.
- Distributed Engineering: Collaborated with a global open-source community to maintain enterprise-grade code standards, improving API documentation clarity for 500+ ecosystem contributors.

FRONTEND ENGINEER INTERN | HNG Tech — 10/2025 – 12/2025
- BFF & Real-Time Data: Architected Backend-for-Frontend (BFF) layers and leveraged Convex for real-time data streaming, successfully delivering high-priority features within strict 24-hour sprint cycles.
- Cross-Functional Velocity: Accelerated deployment cycles by pivoting across React Native and PHP Twig stacks, ensuring 100% adherence to WCAG accessibility standards and zero-downtime releases.

OPEN SOURCE & FEATURED PROJECTS

Message50 (E2EE Messaging) | React, Django, WebSockets, Redis, Docker Compose | Github
- Real-Time Security: Built a React/Django app featuring sub-second E2EE delivery (AES-256/RSA) via persistent WebSockets.
- Queueing & Infrastructure: Managed real-time event distribution with Redis queues and orchestrated the network topology via Docker Compose.

Mosaic (Cardano Blockchain) | TypeScript, Next.js, Neo4j, Redis, Docker Compose, BullMQ | Github
- Graph Infrastructure: Built decentralized invite logic and profile trees using a Neo4j graph database for complex relational mapping.
- Caching & Docker: Implemented a Redis cache layer to minimize DB roundtrips; containerized the ecosystem with Docker Compose.

Open School Portal (School Base) | React, Next.js, BFF Architecture, Convex, Git | Github
- BFF Pattern: Co-developed a multi-tenant platform, applying a BFF pattern to shield sensitive APIs and enforce tenant boundaries.
- Feature Delivery: Drove frontend implementation of administrative modules, integrating Convex for real-time dashboard data synchronization.

CERTIFICATIONS & MORE CREDENTIALS

- **CS50's Introduction to Artificial Intelligence with Python** | HarvardX / CS50 — Focus on foundational neural networks, graph search algorithms, adversarial machine learning, optimization theory, and constraint satisfaction [2026].

- **HNG Tech Frontend Finalist Certificate** | HNG Tech — Credentialed validation for ranking as a top-tier core engineer and finalist during intensive, rapid continuous-delivery software sprints [2025].

LEADERSHIP & PROFESSIONAL INVOLVEMENT

- **Director of Software**, NACOSS — Managing collegiate software builds, code sprints, and mentoring 400+ undergraduate developers.
- **Community Co-Lead, GDGoC** — Coordinating campus hackathons, technical workshops, and rapid prototyping challenges.
- **Technical Team**, FUTA Techies — Directing open-source contributions and engineering bootcamps for student developers.
