PROFESSIONAL SUMMARY

Fullstack Engineer & AI Integrations Specialist specializing in high-performance Web3/FinTech protocols and distributed architectures. Proven leader of technical squads, bridging the gap between complex AI models and production-ready software. Experienced in building scalable multi-tenant architectures, managing low-latency streaming layers, and engineering secure, edge-based AI execution workflows.

TECHNICAL SKILLS

- **Languages:** TypeScript, JavaScript, Python, SQL, C.
- **Frameworks & Libraries:** Next.js (App Router), React, Node.js (Express), Django, Flask, Tailwind CSS.
- **Databases & Caching:** Neo4j (Graph DB), Redis, MySQL, SQLite, Convex.
- **State & Observability:** Zustand, Redux, TanStack Query, Sentry, Mixpanel.
- **Infrastructure & Tools:** Git/GitHub, Docker, Docker Compose, WebSockets (Socket.io), Figma.

WORK EXPERIENCE

FRONTEND ENGINEER | Diab Technologies — 06/2025 – Present

- **FinTech System Architecture:** Engineered high-performance, responsive interfaces for flagship Web3/FinTech applications (Liquidramp, Dexfiat), building robust transaction execution modules that seamlessly integrate with automated liquidity swapping tiers.
- **State Optimization:** Designed an enterprise-grade state synchronization layer using TanStack Query, Zustand, and Redux to manage highly volatile, real-time backend transactional states on the client side.
- **Production Diagnostics:** Implemented full-stack telemetry tracking using Sentry and Mixpanel to isolate transaction exceptions, decreasing production bugs by 30%.

FULLSTACK ENGINEER | Deep Funding (SingularityNET) — 09/2025 – 04/2026

- **AI Implementation Pods:** Developed production-ready MVPs within fast-paced engineering pods, building performant, asynchronous API middleware layers to link distributed AI models with scalable Next.js architectures.
- **Global Code Governance:** Collaborated within an open-source decentralized ecosystem to write, test, and audit mission-critical code patterns, ensuring rigid system engineering standards across the SingularityNET ecosystem.

FRONTEND ENGINEER INTERN | HNG Tech — 10/2025 – 12/2025

- **BFF System Design:** Spearheaded the multi-tenant frontend architecture for the Open School Portal platform, pioneering a Backend-for-Frontend (BFF) layout pattern to abstract microservices and protect sensitive API endpoints.
- **High-Velocity Shipping:** Shipped critical infrastructure features under strict short-time agile continuous deployment sprints, leveraging Convex to implement real-time data streaming engines.

BACKEND ENGINEER INTERN | Darq Envoy — 06/2025 – 09/2025

- **API & Security:** Built resilient Node.js/Express REST microservices for a healthcare application, implementing robust authentication protocols, strict rate limiting, and custom error-handling middleware layers to safeguard sensitive medical user data.
- **Data Integrity:** Managed **NoSQL** data persistence and wrote comprehensive unit tests and error-handling patterns to ensure system stability during the development phase.

FRONTEND TEAM LEAD | NexusmindAI — 10/2024 – 01/2025

- **Leadership & Mentorship:** Promoted from Developer to Team Lead; directed an engineering squad to formalize standard Git workflows, accelerated core release cycles, and directly mentored junior engineers on debugging paradigms.
- **Architectural Standards:** Enforced clean component-based architectures to handle high-fidelity Figma-to-code translations, acting as the core technical bridge to the product management team for task estimation and pull request approvals.

OPEN SOURCE & FEATURED PROJECTS

Mosaic (Cardano Ecosystem) | TypeScript, Next.js, Neo4j, Redis, Docker, Docker Compose | [Github](#)

- **Graph-Relational System Architecture:** Designed decentralized invitation logic and structural user hierarchies via a **Neo4j graph database**, resolving complex multi-node relationship trees and nested query complexities.

- **Low-Latency In-Memory Caching:** Mitigated high-frequency database read/write bottlenecks by engineering an in-memory **Redis** caching tier; fully orchestrated the multi-container topology using **Docker Compose** to maintain seamless environment parity.

Message50 (E2EE Messaging Platform) | React, Django, WebSockets, Redis, Docker, Docker Compose | [Github](#)

- **Cryptographic Pipelines:** Implemented a secure cross-platform web application utilizing a **React frontend and Django ASGI backend**, engineering a data corridor featuring symmetric **AES-256** and asymmetric **RSA** encryption protocols.
- **Full-Duplex Scaling:** Established persistent, bidirectional **WebSocket connections** paired with **Redis message queues** to process real-time event distribution and sub-second message streaming across multi-container Docker nodes.

Open School Portal (School Base) | React, Next.js, BFF Architecture, Convex, Git | [Github](#)

- **Multi-Tenant Security Architecture:** Collaborated as a core engineer to build an enterprise multi-tenant school management platform, pioneering a Backend-for-Frontend (BFF) style design pattern to decouple client routes, shield sensitive APIs, and enforce rigid data boundaries.
- **Component Modularity & Optimization:** Drove the production implementation of heavy administrative modules using Next.js; engineered a highly reusable, component-driven UI architecture that drastically reduced code duplication and optimized dashboard rendering performance.

Pic2Plate (AI Computer Vision Platform) | Next.js, TypeScript, PostgreSQL, Cloudinary, Gemini Vision API | [Github](#)

- **Multimodal Data Processing:** Engineered an intelligent recipe generation and culinary analysis platform leveraging Next.js and TypeScript; integrated the Gemini Vision API to execute real-time image recognition on binary image uploads.
- **Storage & Relational Pipeline:** Coordinated secure file ingestion pipelines using Cloudinary for transient multi-media storage with a relational PostgreSQL schema layer.

CERTIFICATIONS & MORE CREDENTIALS

- **CS50's Introduction to Artificial Intelligence with Python** | HarvardX / CS50 — Focus on foundational neural networks, graph search algorithms, adversarial machine learning, optimization theory, and constraint satisfaction [2026].
- **CS50's Web Programming with Python and JavaScript** | HarvardX — Advanced engineering of robust application programming interfaces (APIs), asynchronous request architectures, and scalability using Django and relational databases [2024].
- **CS50's Introduction to Computer Science** | HarvardX — Deep immersion in memory management, execution complexity ($O(n)$ notation), algorithmic sorting, data structures, and low-level development in C and SQL [2023].
- **HNG Tech Frontend Finalist Certificate** | HNG Tech — Credentialed validation for ranking as a top-tier core engineer and finalist during intensive, rapid continuous-delivery software sprints [2025].
- **Programming Foundations with JavaScript, HTML, and CSS** | Duke University (via Coursera) — Foundations in functional programming paradigms, logic compilation, and data encoding practices (including steganography pipelines) [2022].

EDUCATION

FEDERAL UNIVERSITY OF TECHNOLOGY, AKURE
B.Tech Computer Science (**CGPA: 4.81 / 5.0**)

Ondo State, Akure
01/2024 - 2028

LEADERSHIP & PROFESSIONAL INVOLVEMENT

- **Director of Software**, NACOSS — Managing collegiate software builds, leading code sprints, and mentoring undergraduate developers.
- **Community Co-Lead**, GDGoC — Managed community growth, handled member communication, and ran social media, publicity and public relations.
- **Technical Lead**, FUTA Techies — Directing open-source contributions and engineering bootcamps for student developers.
